

# Model SPD Steel Perforated Diffuser

Model SPD diffuser provides a displacement system giving improved air quality and lower temperatures in the occupied zone. The perforated cover plate provides a constant air distribution over the entire face area without any risk of draught. SPD is designed for installation within the step riser in auditoriums, theatres, cinemas, halls, where good indoor climate conditions are required.

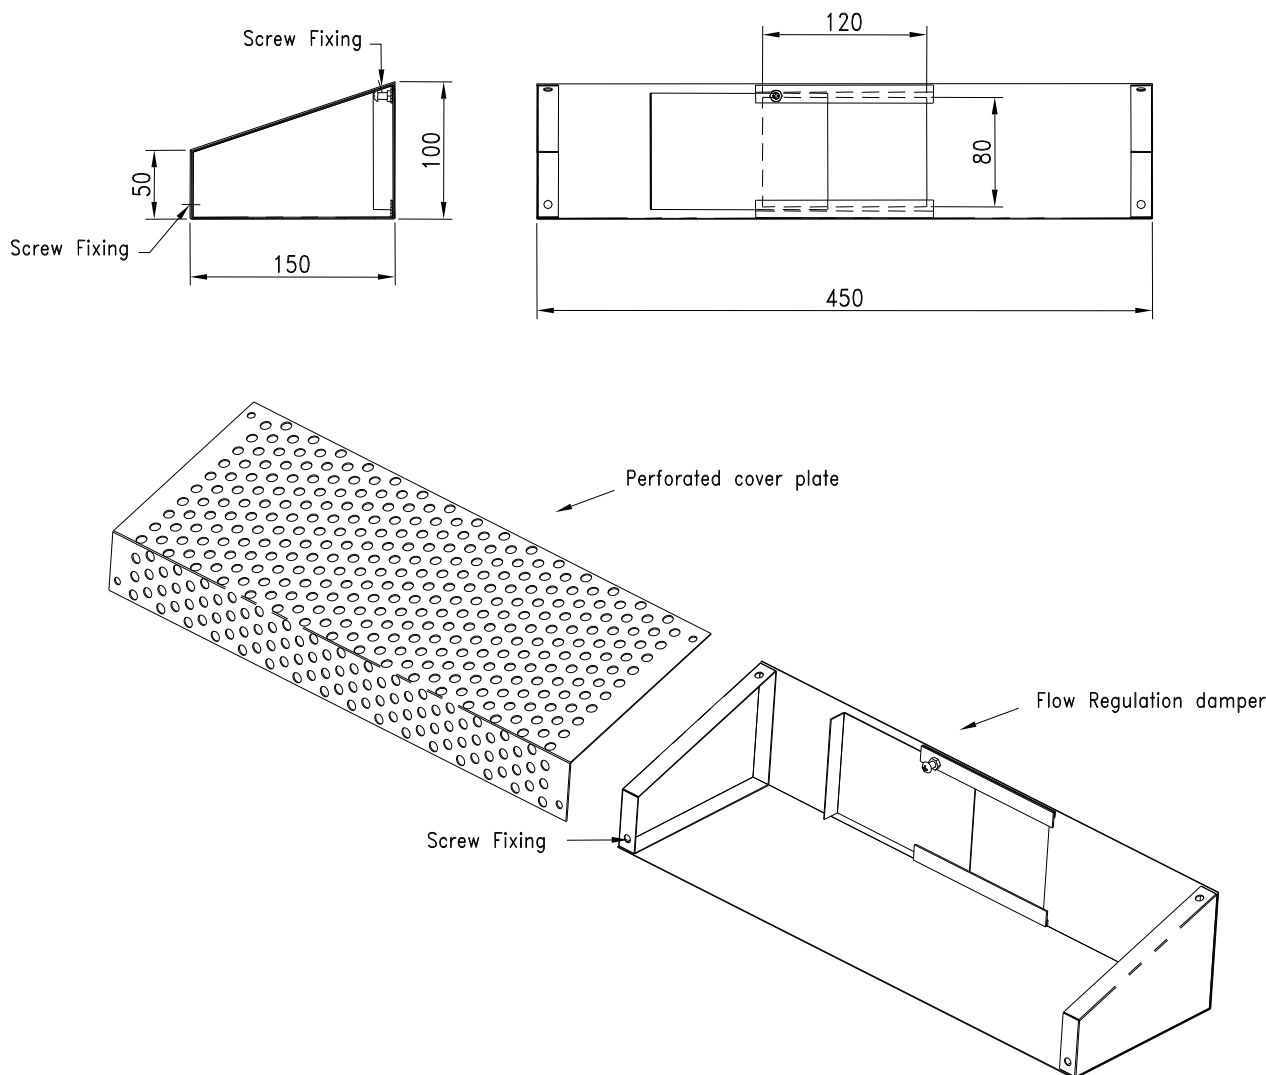

## Features

- Low velocity under seat air supply.
- Easy to install.
- Easy to adjust air flow by regulation damper.

## Finish

- Steel construction.  
Standard finish is black powder coating.  
Special colour finishes are available to match architectural requirements.
